

# MHU-226 Munitions Handling Unit

NSN: 1740-01-506-3624 RN - P/N: 20038001  
U.S. Patent No.: US6,935,818 B2 - Cage Code: 5T389  
*ISO 9001:2000 Registered*

## FEATURES:

- USAF Approved Munitions Trailer
- Replaces MHU-141 and MHU-110 Trailers
- 3-Door Design Increases Load Capabilities and Versatility
- Improved Reliability and Maintainability
- Capacity: 12,000 lbs. Payload
- 15 mph Loaded - 30 mph Unloaded
- Roadability Type III, MIL-M-8090
- Shipping Weight: 3,100 lbs.
- Dimensions: Width: 87" Length Towbar Up: 194.50" Length Towbar Down: 275.00" Height: 31.50"
- Leaf Spring Suspension System
- Double Ackerman (four wheel coordinated) Steering
- Hydraulic Disc Brakes with a Parking Brake System on all Four Wheels
- Lightweight Towbar
- Breakaway Braking System for Attachment to the Vehicle

This unit includes a WASP designed and welded aluminum frame/deck structure. The deck features three identical openings, equally spaced the length of the trailer allowing for loading/unloading of all weapons, with all loaders. The running gear incorporates double ackerman (four wheel coordinated) steering which provides superior tracking. The UMT is equipped with four pneumatic tires mounted on two axle assemblies capable of supporting the weight of the fully loaded trailer at speeds of 15 mph and an empty trailer at 30 mph. The brake system consists of disc brakes with a parking brake system on all four wheels and a breakaway braking system that includes a lanyard on the lightweight towbar for attachment to the vehicle.
