

CREW STAIRS

SPECIFICATIONS

MOVE, ADJUST & LEVEL WITH EASE

Get crews to heights of more than 18 feet (5.5 meters) with easily maneuverable stairs designed for stability.

- Single-point hydraulics raise the entire unit, eliminating the risk of damage that comes from multiple lift points.
- Two leveling jacks ensure stability, and an additional stabilizer strut keeps the stairs flat and stable.
- Moveable top handrails accommodate any aircraft door opening.
- The steel main frame levels with manual screw-type leveling jacks and supports 500 pounds (227 kilograms).
- The industry's only parallel stair placement option comes from WASP.
- Perpendicular (shown) and parallel designs available as well as a dual-parallel/perpendicular option.
